# EV R&D - a key pillar of a modern industrial strategy

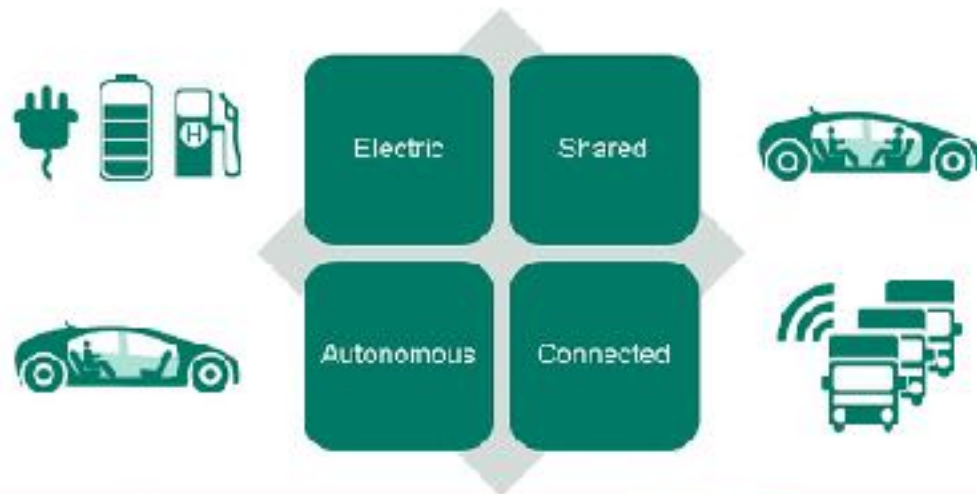

Bob Moran, Deputy Head

Moving Britain Ahead

October 17

## The Future of Mobility

UK is at the forefront of the global shift to electric vehicles.

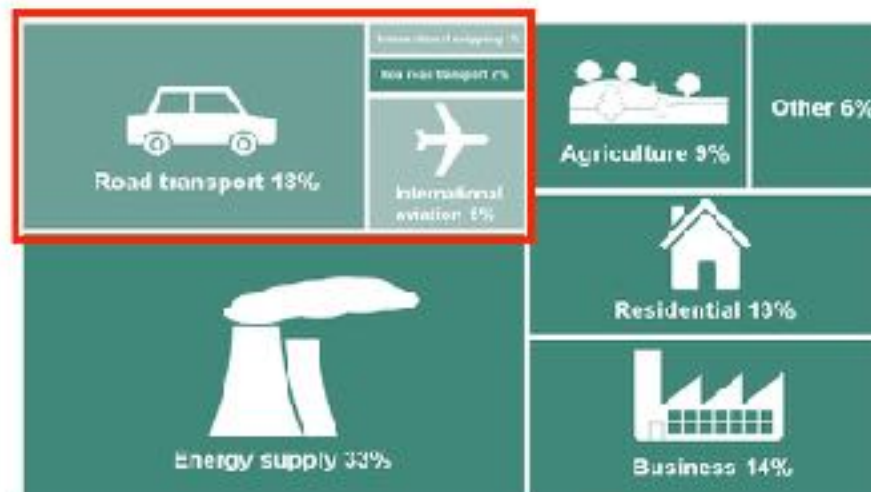

Engineering the new i-PACE – JLR's first battery electric vehicle

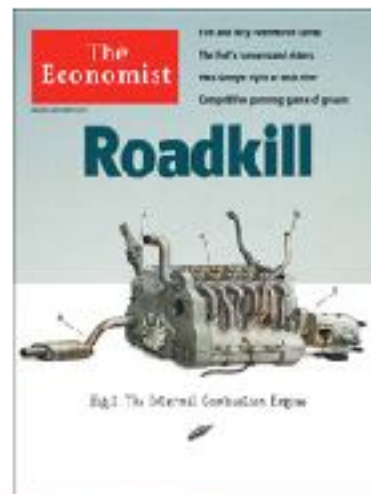

1 of only 2 global hubs for EV powertrain engineering and development

UK Legislation - 80% reduction in CO<sub>2</sub> emissions by 2050.

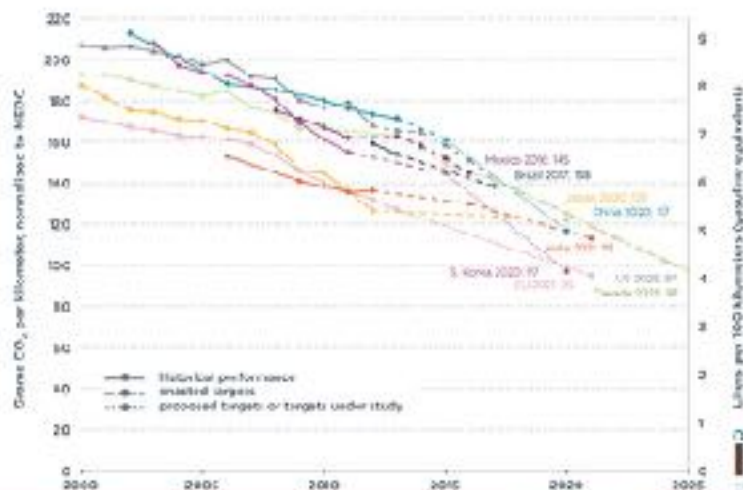

2040? UK are setting the global pace of change.

Global regulation is forcing manufacturers in one direction.

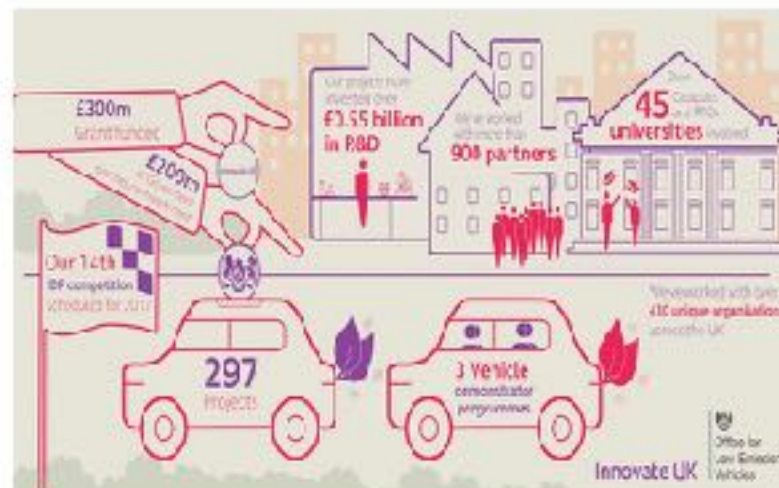

Domestic demand is a key component of UK strategy.

BUT, our strategy is not just about sales targets.

Supporting UK industry and its future growth.

## Spearheading future battery development and production.

**Business Secretary to establish UK as world leader in battery technology as part of modern Industrial Strategy**

**Business Secretary Greg Clark announces the launch of the £200 million 'Tesla Challenge' to fast-track the battery technology.**

- Business Secretary announces the launch of the £200 million 'Tesla Challenge' to fast-track the battery technology.
- The scheme includes support for 10 selected battery technology companies to establish a world-class battery technology research and development centre.
- Business Secretary says the scheme will help to create jobs and support the UK's position as a world leader in battery technology.

Supporting vehicle uptake, use and growing UK industry.

11 OLEV at EVS30 - R&D

Moving Britain Ahead

Thank you.
